ESTRELA MOUNTAIN DOG

BREED STATISTICS: This interpretation is based on a cross-section of 119 canine patients of the ESTRELA MOUNTAIN DOG breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.28 - 0.82) for the breed. The breed average DI is 0.48 (solid square). The patient DI is the solid circle (0.27).

SUMMARY: The degree of laxity (DI = 0.27) ranks the hip within the tightest 5% of DIs for the breed. This amount of hip laxity places the hip at a minimal risk to develop hip OA. **No radiographic evidence of OA for either hip.**
